

# AZOS: Engine of Fertility

## ReFi needs fertility.

Azos unlocks the latent liquidity of regenerative assets, and dampens their volatility.

## Developers need tools.

Azos is a foundational and stable primitive used to build advanced DeFi applications.

## Better.

Azos is a true third generation DeFi protocol. More yield. Better stability. Enhanced scalability.

# Introducing The Azos Protocol

Azos is a collateralized debt platform that dampens volatility, unlocks liquidity and produces stable assets. It is based on the Goedell, Escher, Bach (GEB) reflex index.

# Ecosystem Benefits

## **Yield**

Strategies built on Azos naturally have more yield.

## **Stability**

Our unique stabilization mechanism automatically maintains balance.

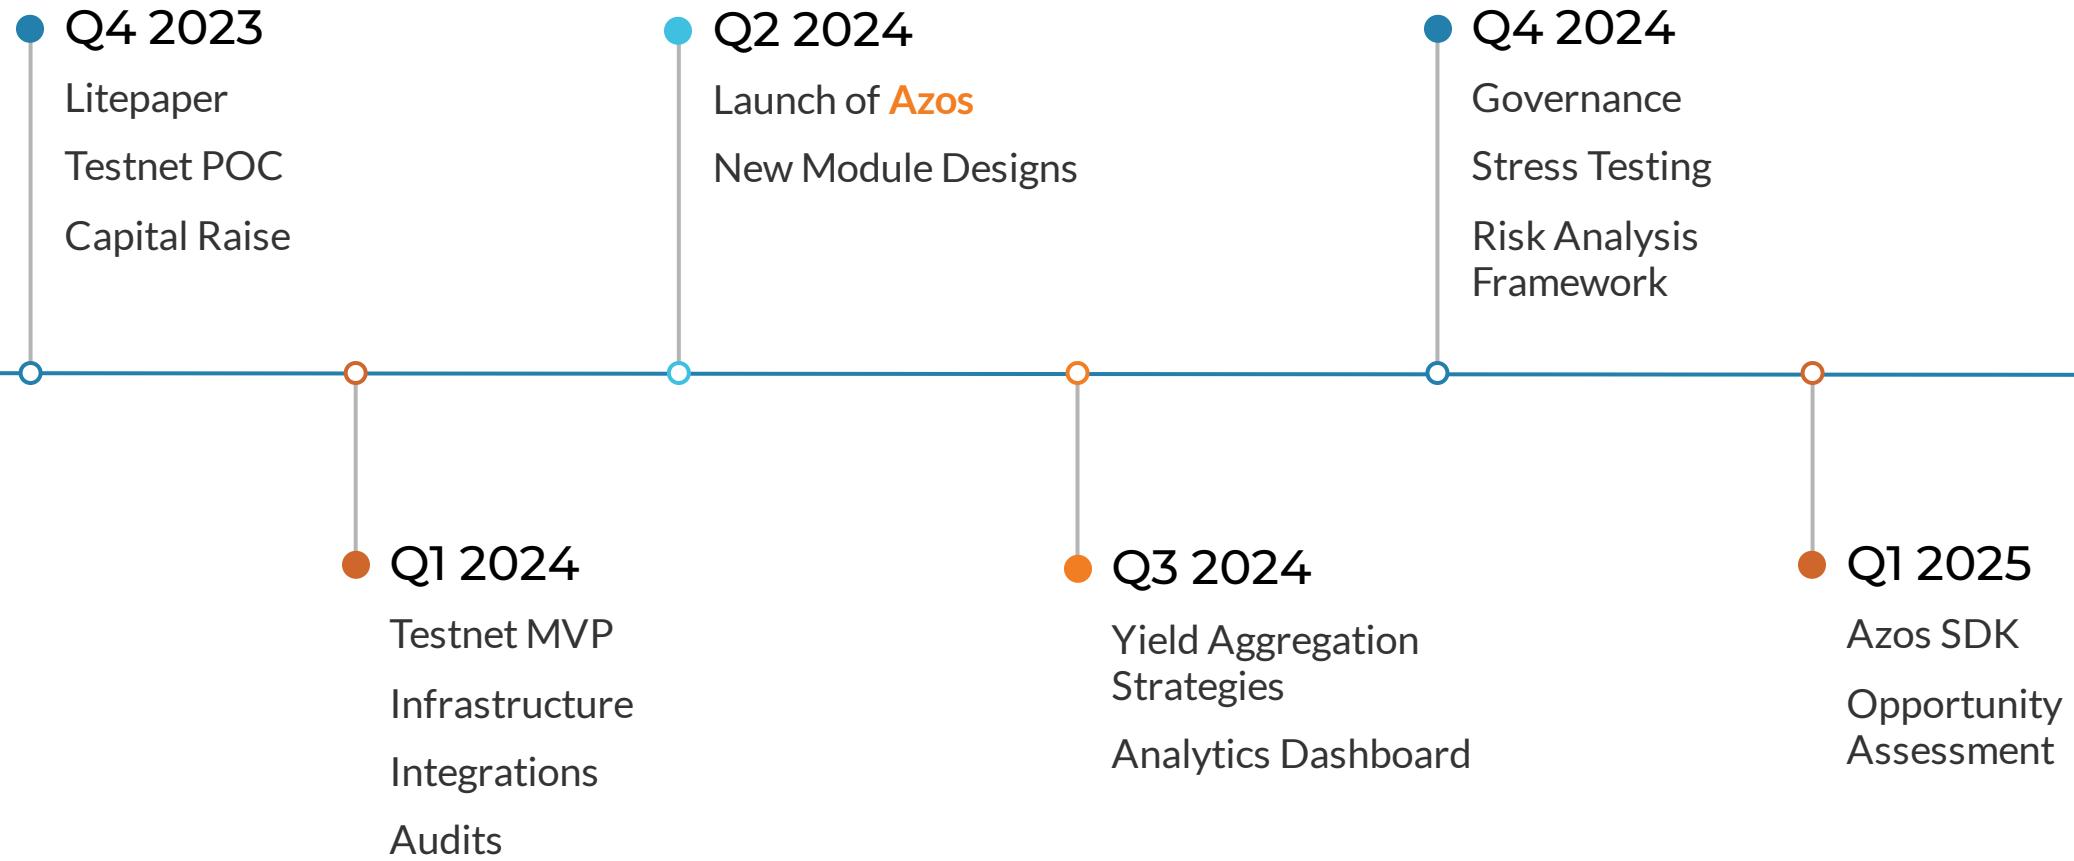

## **Scalability**

Azos scales; and unlocks liquidity with greater capital efficiency.

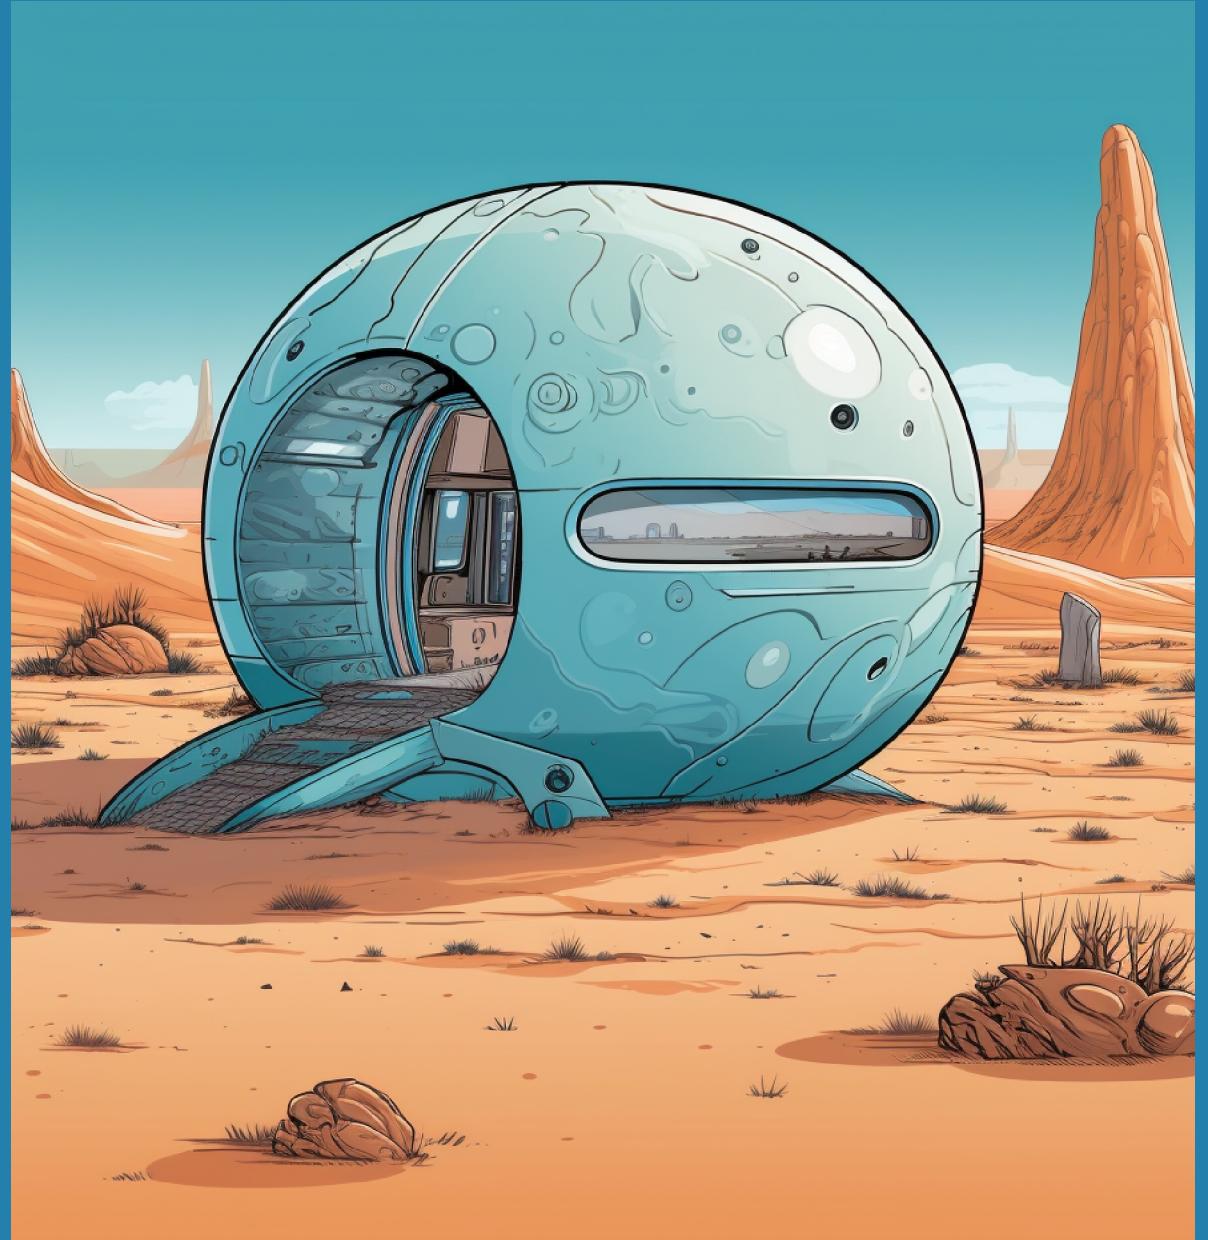

Azos is a powerful tool for building next generation DeFi applications.

# Development Timeline

“I have, for many years, been in favor of replacing the Fed with a computer.”

-MILTON FRIEDMAN

## Competitive Edge

# Unique Mechanics

1

### Azos Modules

Azos modules are special rule based smart contracts. They allow permission-less functions which maintain the protocol's health.

2

### Virtual Debt

The Azos modules can create their own internal debt; provided that it always maintains backing of stable collateral. This allows better scalability than other platforms.

3

### Stability

Azos' Stability Module expands and contracts supply to maintain constant equilibrium. Stable assets, stay stable.

4

### Value Accrual

First and second generation CDP platforms leak enormous value to unaligned participants. Azos retains that value.

5

### Long Tail Emissions

Azos distributes protocol ownership to a large number of participants over long periods of time. These long-tail emissions will ensure yield aggregation strategies continue to outperform competitors for years.

# Competitor Analysis

## MakerDAO

TVL: \$5.7b  
Supply: \$4.4b  
MC: \$620m  
Revenue: \$35m  
Total Rev: \$169m

## Frax

TVL: \$801m  
Supply: \$1b  
MC: \$386m  
Yearly Rev: \$25m  
Total Rev: \$124m

## Liquity

TVL: \$671m  
Supply: \$278m  
MC: \$76m  
Yearly Rev: \$2.6m  
Total Rev: \$25.6m

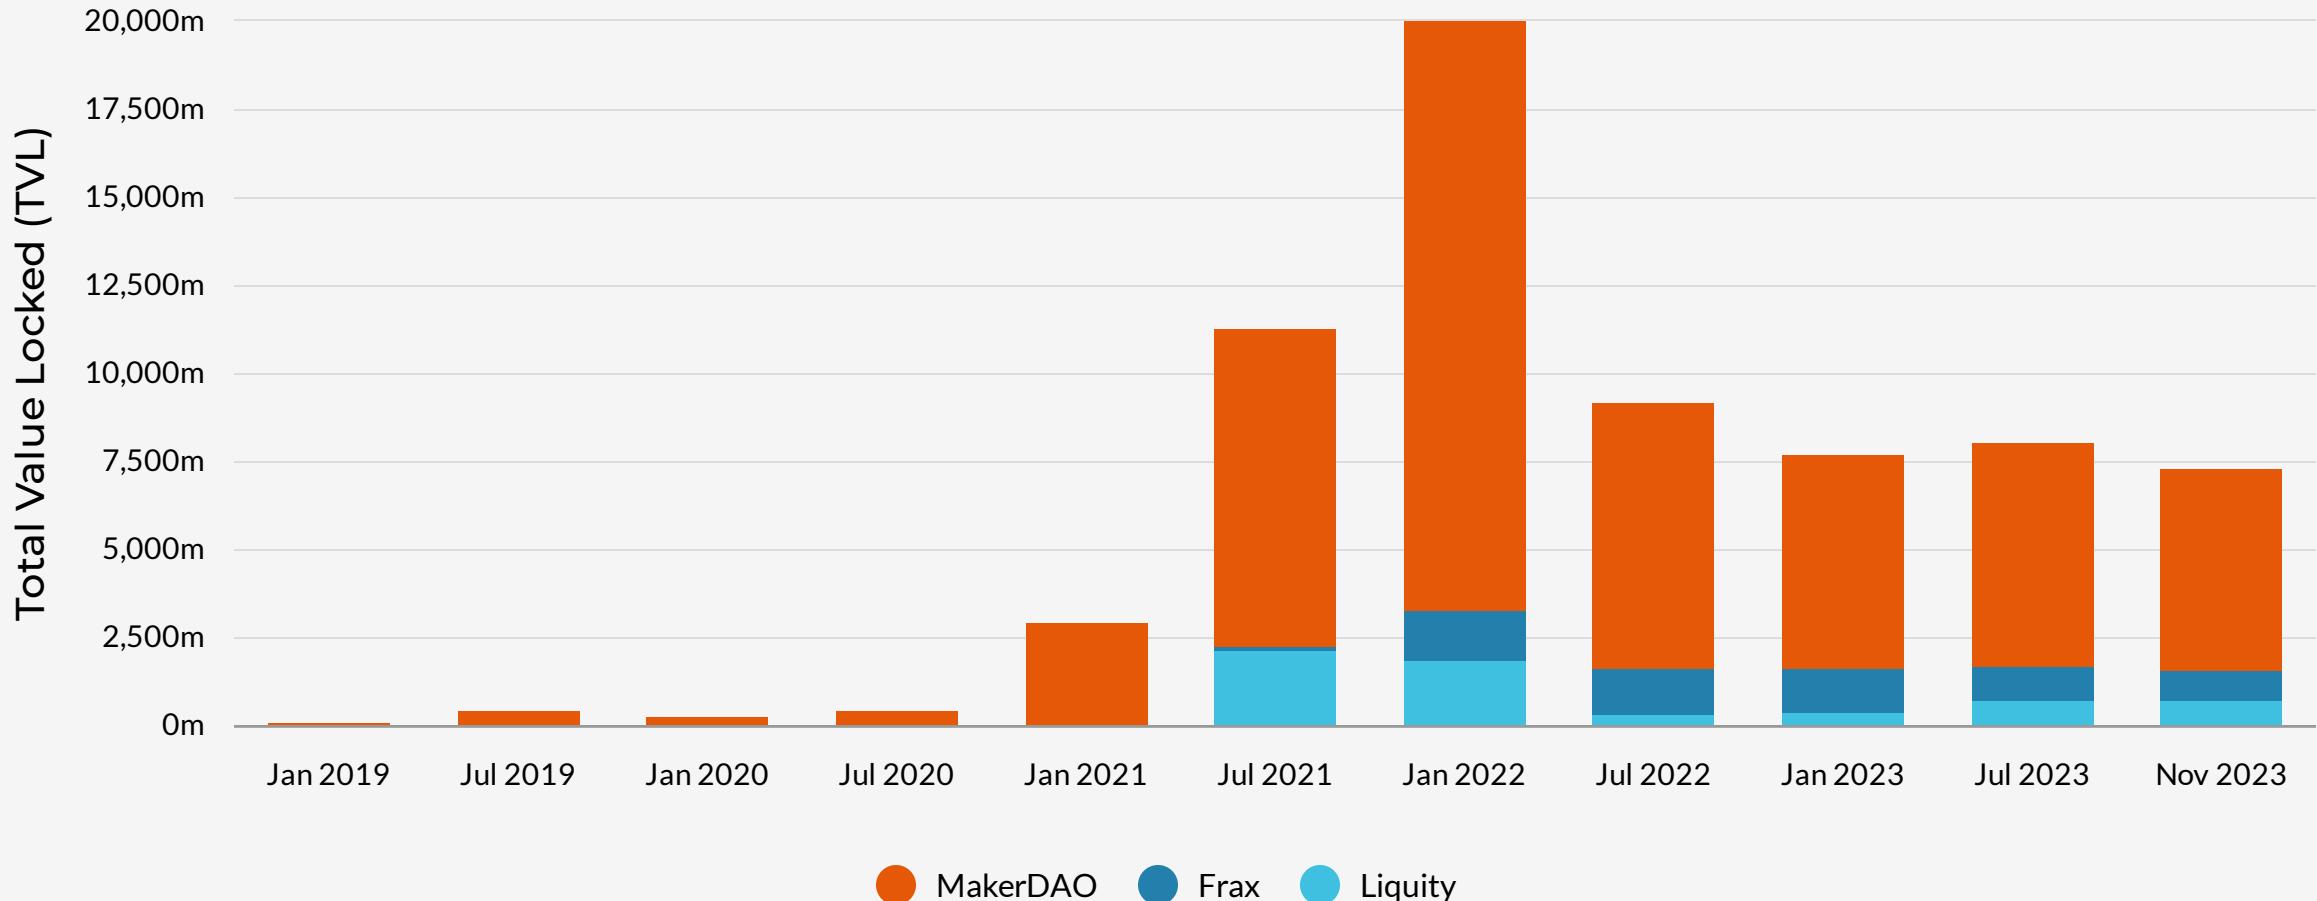

**Analysis shows that first and second generation CDP platforms are leaking 31-79% of the value they create to unaligned market participants.**

# Feature Comparison

Azos	MakerDAO	Frax	Liquity
1 to 1 Supply Scalability	✗	✓	✗
Leveraged Yield Strategies	✓	✗	✓
Long-Tail Emissions	✗	✗	✗
Increased Value Capture	✗	✓	✗
Automated Rate Setter	✗	✗	✗

# Our Team

## **Experience**

Our team has over 40+ years of experience in Software Engineering. We are dedicated and passionate about building great technology.

## **Web3 Experts**

We are native Web3 builders. Our founders have combined DAO experience of 16+ years. We know the pain points, pitfalls, gotchas and workarounds.

## **We Ship**

Our team is intensely scrappy. We have a unique combination of skills, knowledge and thought leadership which sets us apart from other teams.

Our members have led development projects at Amazon, given presentations at mainstream Ethereum conferences and been featured in Vice News.

Impact starts  
with Azos.
